Rescale, Inc.
900 Mission Street, Unit #21
San Francisco, CA 94103
United States

Dear Hiring Manager,

I am writing to express my strong interest in the Application Engineer, Agentic Workflows position at Rescale. With a Ph.D. in Mechanical Engineering and over a decade of experience building complex computational workflows, I am excited to bring deep domain expertise in simulation and engineering to the development of agentic AI systems.

At Los Alamos National Laboratory, I spent five years developing physics-based surrogate models, multi-scale modeling pipelines, and custom automation tools using Python, C++, and Linux. I'm particularly excited to have recently been building structured, folder-based automation systems and integrating LLM-based tools into VSCode to make complex analysis pipelines significantly more efficient and transferrable. My work has focused on making compute-heavy simulations more accessible, reliable, and scalable — skills that I believe directly translate to designing robust agentic workflows for engineering users.

I am particularly drawn to Rescale because of your mission to accelerate engineering innovation through high-performance computing and AI. I am eager to combine my hands-on experience encoding complex engineering processes with emerging agentic AI technologies to create intuitive, reliable, and production-ready workflows.

Key strengths I would bring to the team include:

- Deep expertise in computational mechanics and simulation workflows.
- Strong Python automation and systems design skills.
- Experience translating complex technical requirements into practical, maintainable solutions.
- A proven track record of bridging research and production environments.

I believe my background in building complex engineering systems would allow me to contribute to Rescale's agentic workflows. I would welcome the opportunity to discuss how my experience could support your team.

Thank you for your consideration.

Warm regards,

Andre Ruybalid
