Hiring Manager  
Oklo Inc.  
Santa Clara, CA

Dear Hiring Manager,

I am writing to express my strong interest in the **Materials Engineer** position at Oklo. With a Ph.D. in Computational and Experimental Mechanics and over five years of R&D experience developing physics-based constitutive models for nuclear reactor materials at Los Alamos National Laboratory, I am excited to contribute to Oklo's materials selection and governance efforts for advanced fission power plant development.

At LANL, I developed multiple data-driven material models and custom Python-based workflows that bridge lower length-scale mechanics of nuclear reactor materials to engineering-scale predictions. My work on "LAROMance" surrogate models (for the BISON fuel performance framework), which curated datasets from tens of thousands of low length-scale computer simulations, established a framework for capturing microstructural material knowledge in a way that supports fast, standardized, and defensible material evaluation and selection processes. This experience has given me a strong appreciation, through both modeling and experimental validation, for identifying where models are reliable and where knowledge gaps remain critical for making technically justified material recommendations under extreme conditions, relevant to nuclear reactor materials.

What excites me most about Oklo is your mission to deliver clean, reliable, and affordable energy through fast fission technology. I am eager to bring my experience in multi-scale materials modeling, degradation mechanisms, and cross-functional collaboration to support Oklo's materials governance and reactor system development.

I would welcome the opportunity to discuss how my nuclear materials modeling experience can contribute to Oklo's groundbreaking work. Thank you for your consideration.

Warm regards,

Andre Ruybalid
